

SIZING THE RUBBER STRAP

If you prefer a loose fit of the strap around your wrist, cut off 1 cm from each strap. Try it on. Repeat if necessary.

If you prefer a precise fit around your wrist, please follow the instructions:

- 1 Measure your wrist using the measuring tape.
(Example: 20 cm).
- 2 Subtract from your wrist size the watch case length **(4 cm)**.
(Example: $20 - 4 = 16$ cm).
- 3 Divide the result by two.
(Example: $16 \div 2 = 8$ cm).
- 4 Detach the buckle from the strap and remove the spring bars.
- 5 Mark the calculated length **(8 cm)** and carefully cut off the excess strap along the marks on each half of the strap.
- 6 Reinsert the spring bars, attach the buckle, and secure the strap to the watch case.
